FULL-TIME EQUIVALENT POSITIONS Sub-strategy Description and Justification:

This program is mandated by Chapter 437 of the Texas Health and Safety Code to conduct retail food inspections of restaurants and other food service operations, retail food stores, mobile food units, and roadside food vendors in all areas of the state which are not under local inspection. Inspections of these facilities are necessary to assure the delivery of safe food to consumers and minimize the opportunities for food borne disease. In addition, the program responds to over 3,500 food safety inquiries a year from consumers, local health departments, and other governmental agencies, and investigates an average of 700 consumer complaints per year. The program also develops standards and procedures for the accreditation of education and training programs for persons employed in the food service industry.

External/Internal Factors Impacting Sub-strategy:

Funding for the retail food inspection program is necessary to assure inspection services of retail facilities in Texas. Failure to operate this program would result in over 12,000 retail food establishments not being inspected. Lack of inspection would result in retail food establishments not meeting minimum food safety and sanitation standards and would thus put consumers at higher risk of food borne illness. This is especially critical since the projected growth rate of the retail food industry is 5% per year. Failure to fund this program would also result in thousands of temporary events each year such as fairs, bazaars, and festivals not being inspected. These temporary events, all of which prepare and sell food, pose a particular public health problem because food handlers in these operations are largely untrained and many operate in substandard facilities.
